Applicant's election with traverse of claims 1-3 in the reply filed on July 15, 2009 is acknowledged. The traversal is on the ground(s) that the examiner has not provided any indication that the contents of the claims interpreted in light of the description was considered in making the restriction. This is not found persuasive because the examiner pointed to instant pp. 4,5 in the restriction requirement. Furthermore the instantly claimed process is not specially adapted for making the product because the process does not recite nor require the materials, eg. Y, Gd, Pt, and Fe, necessary for making the instantly claimed product.

The requirement is still deemed proper and is therefore made FINAL.

Claims 4,5 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on July 15, 2009.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

Art Unit: 1793

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ooido '751 or Ohido '932 each in view of Takagi '862.

Ooido '751 or Ohido '932 each teach the instantly claimed liquid phase epitaxial process but may differ in that the use of an oxide of sodium is not stated. See example 1 of each.

Takagi teaches a similar liquid phase epitaxial process as each of Ooido and Ohido and teaches the functional equivalence of alkali metal oxide with lead compound in the taught process. See col. 4.

Art Unit: 1793

It would have been obvious to one skilled in the art to substitute sodium for lead in either process of Ooido or Ohido because Takagi teaches them to be functionally equivalent in the same liquid phase epitaxial process.
